

New Features in Medikin Online 3.1

END USER SYSTEM IMPROVEMENTS

- **Read-only MRM Account.** This enables clients to have an alternate login to the MRM account which is read only and doesn't affect regular workflow.
- **Print Status.** The system shows the print status/log in the document archive and document details in addition to the account activity logs.

BILLING REPORT IMPROVEMENTS

- **Excel Reports for Billing.** This simplifies billing for the MTSO by enabling export of the Billing Report data. From there it can be modified if necessary and forwarded to the client.
- **Template Line Counting.** This gives the MTSO the flexibility to include or exclude template line counts when billing clients and paying vendors – a powerful feature for enhancing profit.
- **MT Admin Billing note.** A special note can be added by the MT Admin to an audio file which is displayed in the Billing report
- **STAT Billing Report.** This enables the MTSO to bill for STAT files at a custom STAT rate.
- **Improved TAT Report.** The TAT report now includes a comprehensive overview which enables the MTSO to compensate its typists according to the number of lines that met expected TATs.

MASTER ADMIN ACCOUNT IMPROVEMENTS

- **Unified Control Panel for Master Admin.** This enables the Master Admin to manage users on the ASP and the dictation server.
- **Bulk Account Creation.** This enables the Master Admin to download a spreadsheet template from the system, fill it out and upload it to create accounts in bulk.

DICTATOR INTERFACE IMPROVEMENTS

- **Medikin Typing Platform (MTP).** This enables doctors to edit files in the browser without downloading and uploading corrected files.
- **Improved E-signature.** Using the MTP doctors can e-sign any file by opening it and selecting the e-sign button. As with the previous version the system log is updated to reflect the e-signature date and time, but in the new version the transcript itself is edited with a date and time stamp at the end of the file.
- **Bulk E-signature.** Doctors can select multiple files for e-signature. The doctor does not have to open the files. The system will add the e-signature stamp to all the selected files and update the system log as well.
- **Android Dictation App.** Enable doctors to conveniently use their Android phone or tablet to securely upload dictations. iPhone app was available in 3.0. Now in 3.1 we support Android as well.
- **Nexus VR.** This version of Nexus enables you to maintain clients in the age of voice recognition. Nexus VR uploads audio along with the draft text from voice recognition applications such as Dragon Naturally Speaking. The Medikin workflow with Nexus VR will automatically send the audio to the QA level editor.

USER INTERFACE IMPROVEMENTS

- Hiding rarely used columns behind a –more– button.
- More user friendly doctor drop down list
- More user friendly manual routing workflow
- Configurable default date range search per MT Admin

ADDITIONAL IMPROVEMENTS

- **Online Training Videos.** Let your staff study Medikin's features at their convenience and in a format that is easy to digest.
