# Nexus App
for Medikin Online 3.0

Medikin
The Transcription Automation Company

→ *Nexus* is an application that resides on the PC of the doctor, Medical Records Manager (MRM) or Transcriber (MT or QA)

→ *Nexus* automatically uploads new audio files when a digital recorder is docked to the PC and automatically downloads finished reports for the doctor and MRM. MTs also use *Nexus* to automatically download new audio files

→ Clients have always loved the simplicity and automation of our upload/download app. *Nexus*, the Medikin 3.0 version, has these added benefits:

Nexus is more user-friendly for doctors, which means less support for you

→ *Nexus* works even when the user is not logged in to Medikin Online via the browser

→ *Nexus* shows the progress of each individual file as it is uploading or downloading

→ *Nexus* nomenclature is more clear. Upload is called Send. Download is called Get

→ *Nexus* has a refresh button. You'll never have to explain how to refresh via right-clicking

→ *Nexus* has buttons linking directly to the storage folders of files on the client's PC

→ *Nexus* has a more modern and professional look and feel

Nexus is secure and robust

→ *Nexus* requires its own encrypted login

→ *Nexus* contains a thorough transaction log which can be used to diagnose errors

Adding the *Nexus* app is easy

→ Upon activation the client sees a prominently displayed *Download Nexus* button

→ The doctor or MRM can just click on the Download Nexus button and follow the simple installation instructions

→ The user can run Nexus by clicking on its icon or Start / All Programs / Nexus

→ The doctor or MRM can log in using the same credentials as if logging into Medikin Online
